

Small Cells, Big Money!

June 3, 2014

HOUSTON, Dec. 16, 2011 (GLOBE NEWSWIRE) -- Crown Castle International Corp. (NYSE:CCI) announced today that it has entered into a definitive agreement to acquire NextG Networks, Inc. ("NextG") for approximately \$1.0 billion in cash. NextG, the largest provider of outdoor distributed antenna systems ("DAS"), currently has over 7,000 nodes-on-air and a further 1,500 nodes under construction. In addition, NextG has rights to over 4,600 miles of fiber.

Dear CCI Shareholders:

Times have changed since the above press release was distributed in December 2011: "nodes-on-air" are now known as "small cell" technology, which is the core of Wytec's technology, subsidiary of CCI. Back then, the \$1 billion valuation methodology for the NextG acquisition was more about access locations (Light Poles), than about the antenna technology. But technology evolves and the features of the NextG radio technology attached to their 7,000 pole locations are considerably less than today's new and improved enhancements.

Today, technology advances like Wytec's LPN-16 - with its unique form factor designed specifically for light pole access and its infinitely upgradable features - make our technology substantially superior to the outdated NextG technology. For one, the LPN-16 has considerably greater revenue potential due to its ability to support not only carrier traffic (NextG's only customer) but Cable and Fiber Optics services as well. The LPN-16 is clearly the obvious alternative to offerings such as Google's Fiber-To-The-Home (FTTH) at a significantly lower cost with the ability to be deployed in a fraction of the time.

On another note, altogether, I have received multiple inquiries regarding the current stock activity of CCI. It is important to understand that though our stock price does not reflect it, Wytec has been very active in positioning itself to duplicate and even exceed the NextG transaction with Crown Castle described above. This will, in time, have a significant impact on the value of CCI. Since the development and filing of our provisional patent for the LPN-16, the interest and growth in the Small Cells Industry has outgrown all other technological news related to mobile broadband services and now includes the deployment of FTTH.

Most recently, we traveled to Charlotte, North Carolina in response to the interest of a fiber optics service provider to discuss the merits of the LPN-16 and how we could accelerate their FTTH deployment. The excitement level was so high, that a second meeting was confirmed for June 10 to draft the parameters of a pilot test for the LPN-16 utilizing the Cities light poles. The City is wholeheartedly involved and supportive of this pilot test. The test will not only include gigabit broadband to the home, but Internet Protocol Television (IPTV). This is the crux of the Google model. This and the continued growth of our sales organization under the leadership of our new national sales manager, Johnnie Leal will most certainly have a positive effect on the CCI stock value over the weeks to come.

In order that you may be better informed with the events occurring at CCI's subsidiary level, I have provided you access to the Wytec Executive Business Summary. You may review this at www.wytecintl.com/ppo.php and typing in the password-project2014.
